

Geriatric Medicine

Our service is a good wellness tool for the geriatric physician in that all of their patient mix should qualify for testing. Elevated pulse wave pressures in ABI over the age of 70 correlate with increased risk of dementia.

Weight Management

P4P is a good wellness tool for weight management physicians. Most patients will likely qualify for our service because of the higher rates of diabetes/ thyroid/ cholesterol issues in overweight patients.

Pulmonology (includes Sleep Disorders)

The link between COPD and autonomic dysfunction and heart disease makes our service a useful diagnostic screening tool.

Urology

P4P helps rule out vascular causes of *ED*.

Internal Medicine

As with Family Practice, P4P is a great wellness tool for testing hidden diseases in asymptomatic patients. In addition, we help diagnose the root causes of complex symptomologies related to the cardiovascular and autonomic nervous system. 60% of adult patients qualify.

Other Medical Practices That Benefit From Pulse 4 Pulse Testing**Nephrology (Kidney)**

All patients with Stage III kidney disease qualify - the link is they have a higher risk for PVD.

Orthopedic Surgery

P4P testing has clinical relevance in the orthopedic space because it is a good wellness tool used pre-surgery to identify circulatory and diabetic issues.

General Surgery

P4P is a good screening/wellness tool pre-surgery for detecting *PVD* and *CV* (covers your need to cover these risk assessments).

OBGYN

Because OGBYN physicians often act as the primary care physician for women of childbearing age P4P is a good wellness platform to help identify hidden disease in asymptomatic patients.

Ophthalmology

Our service is a good wellness tool for ophthalmologists, especially in diabetes detection.

Sports Medicine

P4P is a good wellness platform for sports medicine practices.
